Era7 bioinformatics - ohnosequences!

In the morning

This should be a nice text. Put some *emphasis!*

- Turn **off** alarm
- Get out of bed

Breakfast

- Eat eggs
- Drink coffee

In the evening

Dinner

- Eat spaghetti
- Drink wine

This should be something!

Styles

$$\Delta\Delta^{\dagger} = 1_X$$

Adjoints can be defined through extensions, as

$$Lan_G 1 = F$$

```haskell
data DList a = DLNode (DList a) a (DList a)

takeF :: Integer -> DList a -> [a]
takeF 0       _                  = []
takeF (n + 1) (DLNode _ x next) = x : (takeF n next)

takeR :: Show a => Integer -> DList a -> [a]
takeR 0       _                  = []
takeR (n + 1) (DLNode prev x _) = x : (takeR n prev)
```

Code II

Scala syntax highlighting is awful

```scala
// Scala has objects
case class test {
  lazy val x = 2
  type T = Int
  def oh: String = "Buh!"
  def uh[X <: Any](l: Boolean): X

  val f: String => Int = _.length

  val g: String => Int = x => f(x)
}
```
